ADISRA® ANNOUNCES RELEASE OF ADISRA SMARTVIEW V4.0.3.6

ADISRA SmartView V4.0.3.6 gains new functionality and usability features based on feedback from customers.

AUSTIN, Texas, December 8th, 2022 — ADISRA today announced ADISRA SmartView V4.0.3.6 is now available for immediate download from the ADISRA website at <https://adisra.com/download/>. ADISRA SmartView is a complete human machine interface (HMI) and supervisory control and data acquisition (SCADA) package that is robust, easy to use, and competitively priced. The latest release adds new functionality, usability features, and performance enhancements making it easy to create applications that meet customers' requirements with greater flexibility.

ADISRA SmartView already delivers a comprehensive and easy-to-use development environment. New development enhancements include a user-friendly proprietary tags database that allows users to simply copy and paste between spreadsheets and other data sources. ADISRA SmartView continues to deliver popular features such as connectivity to SQL-complaint databases which opens up a world of possibilities for data processing, analysis, and integration with the greater Enterprise environment.

A key new feature is the unique alarm system which enables efficient alarm management, an improved user experience, and integrated data sharing in a wide range of production environments. Alarm settings are also integrated in the tag database to simplify application development with new features enabling alarms to be sent to individuals or groups of individuals through WhatsApp and/or emails. The alarm system is a significant part of the operator interface. It provides users with real-time information and vital support warning them of situations that need their attention. ADISRA SmartView V4.0.3.6 release has enhanced the alarm management system, adding new features making it easy to configure from any module within the development environment.

Experienced development engineers understand that an effective user interface design can increase operator productivity, decrease human error, and make operators feel confident and comfortable. ADISRA SmartView's added functionality to allow users to create screens that have the look and feel of web sites and applications familiar to users. In fact, screens can now incorporate web pages, Windows Media players, built-in keypad, and other objects that enhance the user interface design.

ADISRA is focused on improving quality, usability, and performance with each release of ADISRA SmartView. ADISRA SmartView V4.0.3.6 is available immediately for download from the ADISRA website. You can request a demonstration or pricing by sending an email to info@adisra.com.

About ADISRA

At ADISRA, our mission is to deliver intelligent, innovative solutions to leverage the power of industrial machinery and discrete manufacturing. ADISRA was established in 2017 and is headquartered in Austin, Texas. Our software helps users develop applications to automate, monitor, and optimize their most critical assets.
