# 1. Scope

This document will explain how the ADISRA SmartView license operates, how to register a new license, how to deactivate and move a license to another machine, and how to reactivate a license on a machine that was previously licensed.

# 2. Summary

The ADISRA SmartView license authorizes a single machine to execute the ADISRA SmartView software. A single license cannot be used on multiple machines since it is associated with the unique components of the specific machine that generated the licensing code.

The license code is generated using a machine’s hardware identification, which is based on 3 hardware components: CPU, HDD, and Mother Board. The component-based license ensures that a single license will only enable the software to work on a specific machine. If the user plans to change any of the three hardware components, we recommend the user contact ADISRA to deactivate the license and then have it reactivated after the hardware component has been replaced.

The ADISRA team securely generates each license based on a license code generated by the customer. The license generation steps are explained in more detail later in this document. A license can be deactivated by the customer at any time, but if it is deactivated, the customer must contact ADISRA to reactivate the license.

Information about your license is available on the ‘License’ ribbon. The information available is the license status, license type, the maximum clients and tags number, and the license serial number. The license status is represented by a circle color: green means activated, yellow means trial version, and orange means there are five days remaining until trial expiration.

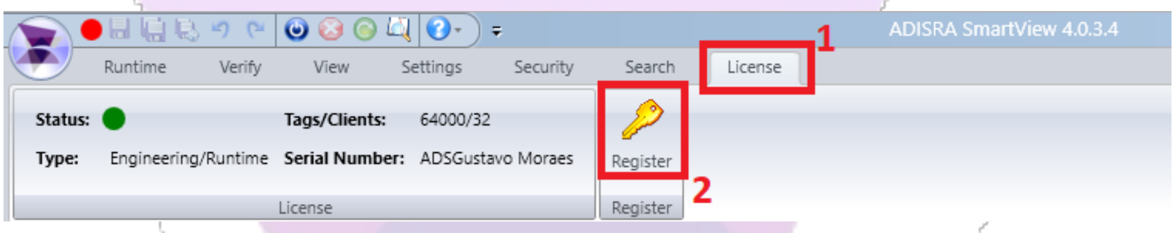
**Serial Number:** ADSGustavo Moraes

## 3. Registering a License

ADISRA SmartView gives the user a 30-day development trial when it is first installed. When the 30 days expire, a permanent license will need to be purchased to run the software. The instructions below will show the steps to register a new license

There are 3 ways to open the “License Register” window.

1. Select the License tab in the ADISRA SmartView banner and then the Register button:



ADISRA SmartView 4.0.3.4

Register your license for full access to all features.

This button initiates a license evaluation process, allowing you to check the validity and status of licenses associated with the software or service.

Generate your license code

In our license validation process it will be necessary to generate a unique key. Generate your license key and send it to ADISRA.

Validate to unlock full program

A file will be sent back for validation, within the license register find the path to this file and validate it. And done, you now have full access to ADISRA® SmartView.

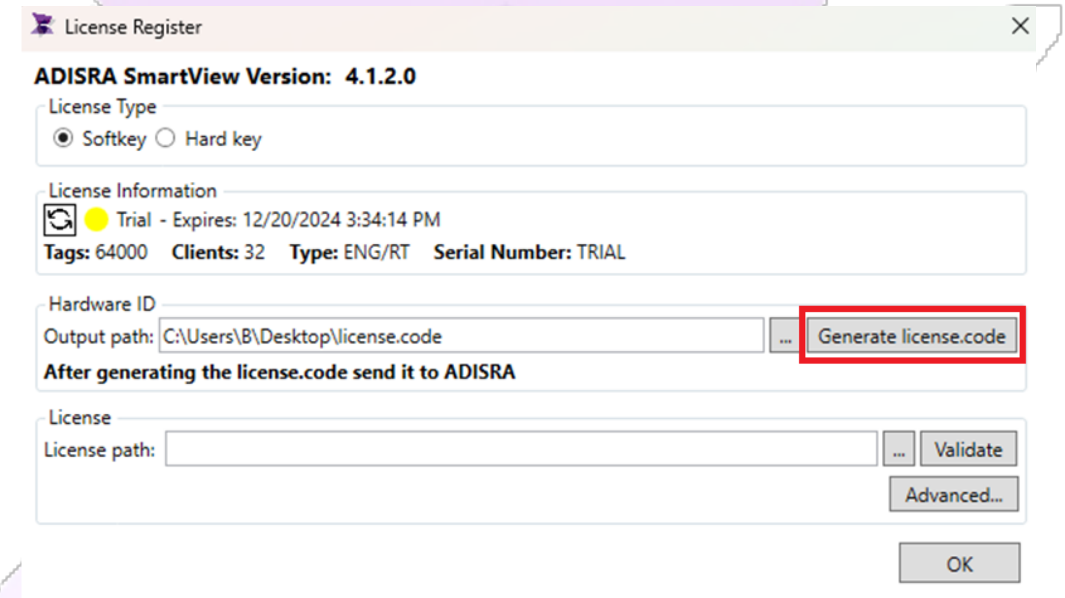
Click 'Open' to initiate the license register to be able to generate and vallidate your license.

There are two license types:  a Softkey and a Hard Key.

## 3.1. Softkey

The softkey involves receiving a digital license, a ".lic" file, from ADISRA.  Follow the steps below to generate and validate the softkey license.

1. Click the button labeled "Generate license.code" to generate file containing this machine's unique Hardware ID information.  The file location will be displayed in the text box called Output Path.



**ADISRA SmartView Version:  4.1.2.0**

● Softkey ○ Hard key

Trial - Expires: 12/20/2024 3:34:14 PM

**Tags:** 64000 **Clients:** 32 **Type:** ENG/RT **Serial Number:** TRIAL

Output path: C:\Users\B\Desktop\license.code

**After generating the license.code send it to ADISRA**

License path:

***NOTE:*** *The user can change the Output Path by clicking on the* ... *button next to the Output Path text box. Please do not change the file name.*

2. Attach the text file named "license.code" to an email and send it to [info@adisra.com](mailto:info@adisra.com).

The ADISRA will verify your purchase and send back a License Key File that matches the Hardware ID. Download and save the license file to your storage drive. It is important to remember the license file location.

3. Enter the license key file location in License Path text box or browse to locate it by clicking on the ... button next to the License path and then click the Validate button.
4. You will be prompted to confirm the operation once the program accepts or validates your License Key.

Your machine is now licensed and ready to use ADISRA SmartView

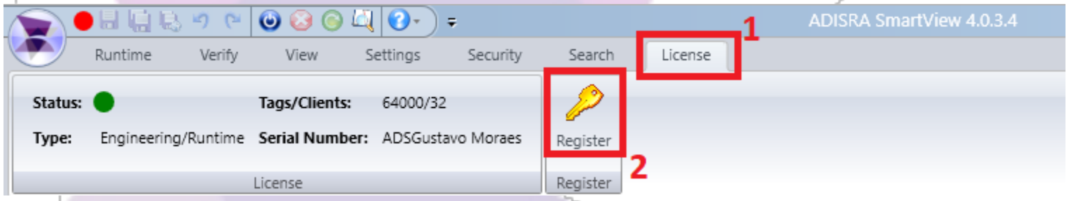
Close the Register License window and run ADISRA SmartView again.

## 3.2. Hard key

The hard key license is a license added to an external removable device called a dongle. The dongle can be purchased from ADISRA (info@adisra.com) or through an ADISRA Distributor. The hard key can be shipped with a valid license already activated or it can be shipped formatted to receive a valid license through the process provided below. If the hard key was shipped with a valid license activated, then no further action is needed. However, if the hard key was shipped formatted to receive a valid license, then please follow the steps below to generate and activate.

Follow the steps below to generate and validate the Hard Key license.

1. Connect the dongle to the computer's USB port.
2. Launch ADISRA® SmartView and in the top menu, click on the "License" tab, then click the "Register" button.



Status: ●
Tags/Clients: 64000/32
Type: Engineering/Runtime
Serial Number: ADSGustavo Moraes

3. In the "License Type" field, select the "Hard Key" option. Click the button labeled "Generate license.code" to generate file containing the dongle's unique Hardware ID information. The file location will be displayed in the text box called Output Path.

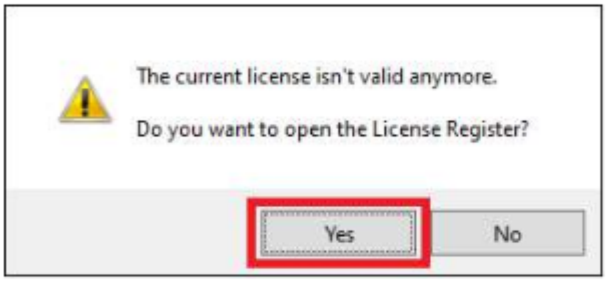
License path:

Note: If you do not have a dongle attached to the computer the License Information will show “No hard key connected”.

4. Attach the text file named “license.code” to an email and send it to info@adisra.com.

The ADISRA will verify your purchase and send back a License Key File that matches the Hard Key. Download and save the license file to your storage drive. It is important to remember the license file location.

5. Now with the “License.lic” file in your possession, open ADISRA SmartView again. A window will inform you that the current license is not valid as the software is not licensed. Click “Yes” to continue.



The current license isn't valid anymore.

Do you want to open the License Register?

6. In the “License Type” field, select the Hard Key option. Then click on the “...” button and point to the “License.lic” file. After clicking the "Validate" button, your license is ready to use. You have successfully validated your Hard Key.

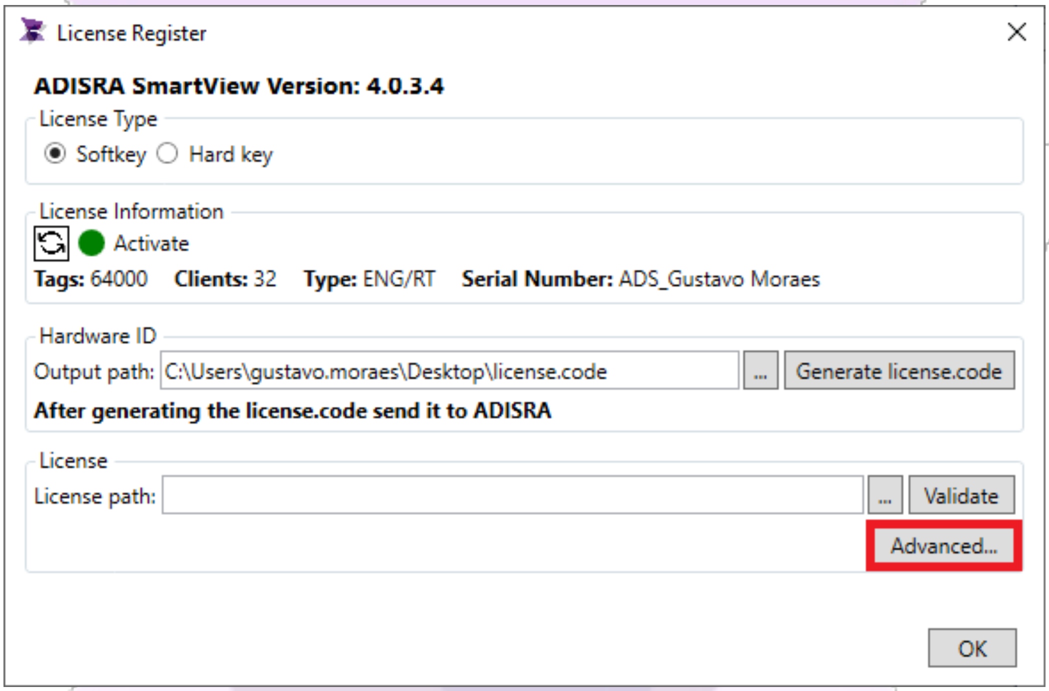
# 4. Deactivating Softkey License

Each ADISRA SmartView Softkey license is registered to a specific machine. In order to use the Softkey license on another machine, it will be necessary to deactivate the current license. To execute the deactivation procedure, please follow the steps below:

1. In the License Register window, press the "Advanced..." button:



License Register
License Type
License Information
Hardware ID
License

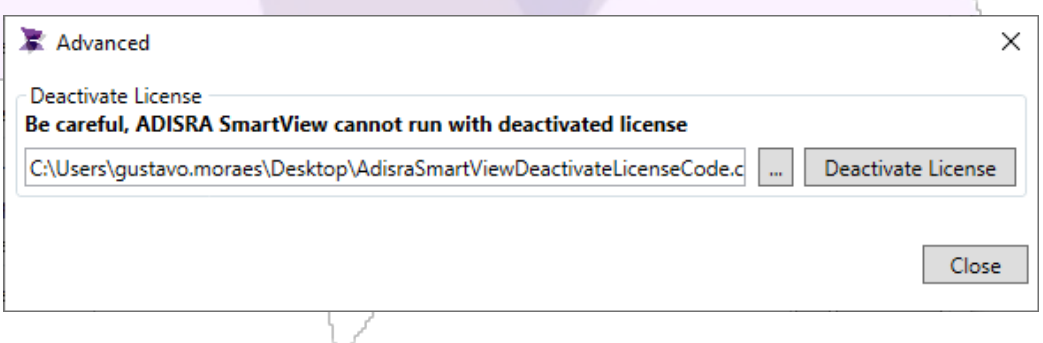
Output path: C:\Users\gustavo.moraes\Desktop\license.code

**After generating the license.code send it to ADISRA**

License path:

2. It will open a new window so you may decide where the deactivated license file will be generated:



Advanced
Deactivate License
...
Deactivate License
Close

**Be careful, ADISRA SmartView cannot run with deactivated license**

C:\Users\gustavo.moraes\Desktop\AdisraSmartViewDeactivateLicenseCode.c

Note: The user can change the deactivated license file location by clicking on the ... button next to the "Deactivate License" button.

3. Click the button “Deactivate License” to generate the file.
4. Once deactivated, ADISRA SmartView will ask for the license again and will not work until a regenerated license is validated again.

To validate a regenerated license, send the deactivated license file to info@adisra.com and ADISRA will send a regenerated license back which you can save to the file location in License Path text box or browse to locate it by clicking on the ... button next to the License path and then click the Validate button.

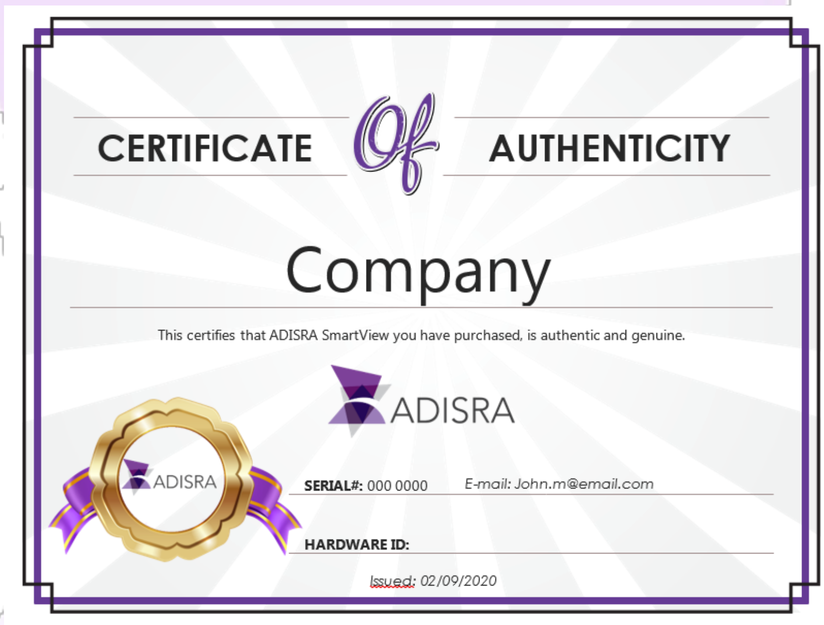
# 5. Certificate of Authenticity

When the user purchases a license for ADISRA SmartView, the software vendor/ADISRA will generate a certificate of authenticity for that license, this certificate contains the owners name, or the company name, the email, along with the license's unique: serial number and the hardware ID.

See below an example of a certificate of authenticity:



CERTIFICATE Of AUTHENTICITY

Company

This certifies that ADISRA SmartView you have purchased, is authentic and genuine.
